

Guardrail D100

GRB D100

recommended for:

Shockproof protection guardrail of non-toxic polymer, to install on pavements.

Application

It is the ideal solution for the protection of walls, door pads and perimetral structures of machinery in case of accidental bumps caused by moving vehicles.

The materials used for its construction are with exceptional physical-mechanical characteristics, in particular the impact surfaces built in non-toxic technical polymer with high level of energy absorption, that along with the perfect visibility color and the rounded shapes that allow the rapid cleaning and easy assembly and maintenance procedures, make this guardrail an effective and essential tool in the company's policy of cost-effectiveness and unplanned production loss.
