Single supplementary guardrail for Aligner in TECKLENE®

Application

This product is an accessory for combined use with aligners, thereby creating an ideal solution for the protection of the portal structure or the loading platform for loading/unloading of goods, equipment and machinery placed on the outdoors of the facility or exterior pedestrian routes, by vehicles in motion.

The materials used for its construction are with exceptional physical-mechanical characteristics, in particular the impact surfaces built in non-toxic technical polymer with high level of energy absorption, that along with the perfect visibility color and the rounded shapes that allow the rapid cleaning and easy assembly and maintenance procedures, make this guardrail an effective and essential tool in the company's policy of cost-effectiveness and unplanned production loss.
