

# Shockproof plate for resin floors

**PRS**

Shockproof plate of non-toxic polymer, to install on walls.

## Application

It is the ideal solution for the protection of walls and perimetral structures of machinery in case of accidental bumps caused by moving vehicles.

Its application is specific and in combination with internal hygienic skirting profiles joining the resin floor and the wall, these shockproof plates create anti-filtration sealing and protection to walls where applied.

The materials used for its construction are with exceptional physical-mechanical characteristics, in particular the impact surfaces built in non-toxic technical polymer with high level of energy absorption, that along with the perfect visibility color and the rounded shapes that allow the rapid cleaning and easy assembly and maintenance procedures, make the shockproof plate an effective and essential tool in the company's policy of cost-effectiveness and unplanned production loss. At the same time, the product in full compliance with current normative standards regarding safety and hygiene procedures.
